Assignment

❖ **What is the difference between Named export, Default export and * as export?**

- ➢ Named export :
  - ○ It can export multiple export from one component.
  - ○ It will export by just adding export before the function or variable name.
- ➢ Default export :
  - ○ It can export only one function/variable from one component.
  - ○ It will export by like this - ***export default <Component name>***
- ➢ * as export :
  - ○ It can be use to export all the name variables from that component.
  - ○ …………?

❖ What is the importance of config.js file

- ➢ …………?

❖ What are React Hooks?

- ➢ React Hooks is a javascript utility function that provide us some utility.
  - ○ There are majorly two important utility hooks provides.
    - ■ useState() (*that use as a powerful variable*)
    - ■ useEffect() (*that use as react lifecycle method*)

❖ Why Do we need a useState Hooks?

- ➢ What happens with normal variables is that suppose variables contain a list of restaurants and we are using that list so in cart but in some cases we have to change that variable data then it will not reflect on the page until unless we refresh the page.

- ➢ That is why hooks came into picture, it gives the variable some superpower like as soon as variable data updates it will automatically rerender the component.
